Environment and Climate Change Canada

Jul 5, 2015

Dear OECD EAGMST members,

During the EAGMST Meeting in Esj, Canada, I represented the University of Saskatchewan and the University of Alberta. I have been involved in the development of the EcoToxChip project and the GEILS project. The goal of these projects is to improve our understanding of the molecular mechanisms of some of the most important toxicological endpoints. The GEILS team is currently working on the development of a high-throughput platform for the study of the molecular mechanisms of toxicity. The details of the project are attached for your information.

The GEILS team is currently working on the development of a high-throughput platform for the study of the molecular mechanisms of toxicity. The details of the project are attached for your information.

If you are interested in participating in the project, please contact me at guillaume.kpain@mcgill.ca
